Evidence-Based Cancer Control Programs

Transforming Research into Community and Clinical Practice

Evidence-Based Cancer Control Programs (EBCCP) is a searchable database of cancer prevention and control interventions. Program planners can access program materials to implement these interventions in clinical or community settings. A range of available tools include:

- Peer-reviewed interventions and associated materials

- Full program summaries

- Case Studies: Insights from the Cancer Control Field

- An online interactive training curriculum for using evidence-based approaches

- Links to the *Guide to Community Preventive Services*, which provides recommendations for interventions that promote public health

EBCCP Evidence-Based Cancer Control Programs

Add Your Program to Our Database

We are always adding to our listing of evidence-based programs and want to hear from you!

Eligibility

Your program must be a tested intervention that includes the following:

- Findings published in a peer-reviewed journal

- One or more statistically significant positive outcomes (behavioral or psychosocial outcomes among individuals, communities, or populations)

- Evidence demonstrated in at least one study using an experimental or quasi-experimental design

- English-language materials that program planners can use in a US community or clinical setting

- Evaluation completed within the past 10 years

Featured Program Areas

- **Alcohol Use**
- **Breast Cancer Screening**
- **Cervical Cancer Screening**
- **Colorectal Cancer Screening**
- **Diet and Nutrition**
- **Follow-up to Abnormal Screening Results**
- **Genetic and Genomic Testing**
- **HPV Vaccination**
- **Lung Cancer Screening**

- **Obesity Management**
- **Physical Activity**
- **Prostate Cancer Screening**
- **Sun Safety and Indoor Tanning**
- **Survivorship**
- **Tobacco Control**
  - Tobacco Use Prevention
  - Tobacco Cessation
  - Secondhand Smoke Exposure
