Evidence-Based Cancer Control Programs
Transforming Research into Community and Clinical Practice

Evidence-Based Cancer Control Programs (EBCCP)
is a searchable database of cancer control interventions and program materials. Program planners and public health practitioners can easily access a range of tools, such as:

- Peer-reviewed interventions and associated materials
- Full program summaries
- User reviews
- An online interactive training curriculum for using evidence-based approaches
- Links to the Guide to Community Preventive Services, which provides recommendations for interventions that promote public health

Add Your Program to Our Database

We are always adding to our listing of evidence-based programs and want to hear from you!

Eligibility

Your program must include:

- Interventions conducted within the past 10 years
- Interventions with English-language materials that practitioners can use in a US community or clinical setting
- Evidence that is demonstrated in at least one study using an experimental or quasi-experimental design
- One or more positive behavioral or psychosocial outcomes (p ≤ .05) among individuals, communities, or populations
- Findings published in a peer-reviewed journal

Featured Program Areas

- Breast Cancer Screening
- Cervical Cancer Screening
- Colorectal Cancer Screening
- Diet/Nutrition
- HPV Vaccination
- Informed Decision Making
- Obesity
- Physical Activity
- Prostate Cancer Screening
- Public Health Genomics
- Sun Safety
- Survivorship and Supportive Care
- Tobacco Control
