Days Until
the New Year!

As we reflect on the year, the Evidence-Based Cancer Control Programs (EBCCP) team would like to commend everyone who has helped with COVID-19 vaccination efforts. Your dedication and commitment are truly inspiring.

Thinking about the importance of vaccines, we'd like to highlight two programs working to increase vaccination rates for a different virus: HPV. [DOSE HPV](#) in Boston educates medical providers on the disease, the vaccine, and effective communication with parents about the vaccine. The [Making Effective HPV Vaccine Recommendations](#) program in Kansas similarly educates medical providers to help improve vaccination rates. The University of Kansas Cancer Center implements the program using [resources from EBCCP](#). **Read these two case studies to learn how you can implement a similar program in your community or clinical setting.**
